

Hauling optimum loads is the most direct route to maximum profitability. The Precision Loads digital on-board weighing system will take the guesswork out of the equation.

We make it simple. The uncomplicated, user-friendly cab mount display unit is compact and powerful. The digital sensors are manufactured in a "clean room" environment to strict ISO 9000 standards. That extra attention to quality control makes life simpler for owners and operators: less wasted time and money spent on downtime and service calls.

RICE LAKE

Rice Lake Weighing Systems is an international leader in the manufacture and distribution of weight-related products and process-control equipment. Within this ISO 9001 registered company, progressive new technologies merge with the wisdom of industry experience and create the future of weighing through cutting-edge research and design.

Our roots are planted firmly in the principles of quality and customer service. Through three generations of family ownership these ideals remain unchanged. Today, Rice Lake Weighing Systems is world renowned for delivering the highest standard of product and the best service in the weighing industry.

We continue our dedication to being the best by every measure—from community involvement to global commitment, and the promotion of ethical business practices that represent the values of our customers, our employees and our company.

Universal on-board weighing for a diverse timber industry

The Precision Loads On-Board Weighing system can be mounted in a variety of ways to fit your vehicle and adapt to your system operating requirements. We will help you select the right configurations for all your straight frame or tractor/trailer vehicles. We have a solution for you.

Our simple step-by-step installation manual guides your installer through the sensor mounting process to ensure optimum safety and precision of the weighing system. Add to that our five-year warranty against sensor breakage for a maximum payload on-board weighing system that every timber product hauler should have.

9710 In-Cab Digital Indicator

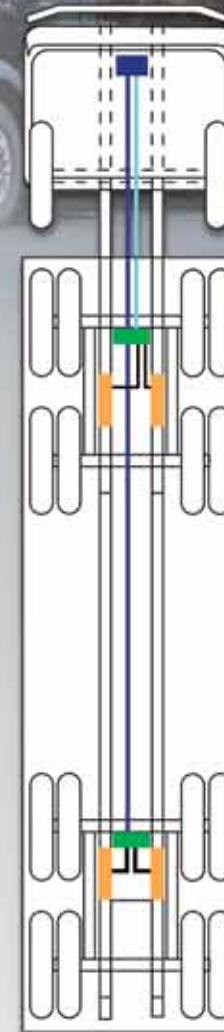

Dual Sensor Air Pressure Transducer

Single Point Trunnion Load Cells

Underbunk Load Cell Mount

The configuration of the Precision Loads On-Board Weighing System will typically include load cells, sealed stainless steel junction boxes, a cab-mount display in single, dual, triple or quad channels, and all-digital connections. Air-ride suspension kits may also be included in system configurations as well as peripheral equipment; printers, GPS and data communications integration, limit alarms and several operating programs. A wireless tractor-trailer option is available to replace cabling.
